# Adding CSS to Your Company Website

---

## Timing

You should be able to complete this training within 15 minutes.

---

## Purpose

Companies like their websites to follow their company branded colors and logos. One of the ways to do that is by using CSS on your company website.

---

## Directions

**Follow these steps to add CSS to your company website.**

### Step 1

Open the Dreamweaver application on your computer.

### Step 2

Select a **blank page** from the template dialogue box when it first appears. If you have an older version of Dreamweaver or your application does not give you this option, simply go to **File > New**

### Step 3

Save your document to your working folder directory with the name **index.css**. Leave only webpage-related files in this directory

### Step 4

Type a **title** for your page in the dialogue box marked with a title

### Step 5

### Step 6

### Step 7

### Step 8

### Step 9

### Step 10

This job aide corresponds with the Adding CSS simulation at right.
